BALLISTIC BOX

Our Ballistic Box is designed to accommodate those extreme high velocity/frangible projectiles that may otherwise disintegrate when fired into water. Extended, variable angle shooting port and barrel rest increase examiner safety and comfort.

EASE OF RETRIEVAL FOR BULLETS OR BRASS IS THE HALLMARK OF THIS SYSTEM.

The 8' rectangular tube contains 7 ft. of highly packed, neatly layered medical cotton. Includes a compression crank to compact the cotton for better stopping power and releases the cotton for easy retrieval. The beefy steel tube mounts on a center pivot height adjustment which allows a fully adjustable shooting angle, and the four-sided enclosure opens completely in half for ease of retrieval. The entire platform rolls on heavy-duty locking casters.

The 11 ga. Stainless Steel tube is fabricated with an extended shooting port which is generously vented on two sides, a barrel-rest insert machined from 1-inch solid HMW, a 5/8" steel stop plate, and will be shipped with a "self-healing" flame deflector. The all-stainless steel construction eliminates the need for paint and insures a long, maintenance-free life for your valuable equipment.

Customization to meet any requirement
